

The BPro Advantage

We solve difficult problems by applying "people skills" to complex technical projects - we **communicate** with our clients.

We write no code until we understand the load... we **think through** the application.

We control costs by implementing the best solution the **first** time.

The end result is powerful, elegant software that combines **simplicity and power.**

Let Technology
Work For You

Quotes from Users...

"The incredible ease in entering incidents makes this NIBRS fun to use. It takes away much of the guesswork regarding required screens and fields and what are appropriate field values."

"I really appreciate the incident search form. This form allows me to find incidents meeting the criteria I select. I can then double click the desired incident for viewing or editing or print a report showing incidents meeting the criteria entered."

"The name search form allows me to determine which incidents 'John Doe' was involved with, as a victim, witness, incident reporter, offender and/or arrestee. Once the incidents are found, a double click with the mouse takes me into the incident. I can also print a report of all incidents found for the selected person."

*"Combining Simplicity
and Power"*

NIBRS Can Help...

- Built in error checking
- Easy searching and reporting
- Transfer of data between agencies and state with ease
- All crime information collected into one comprehensive and powerful database
- Reports for:
 - Administration**
 - Operation**
 - Management**
- Report data to the :
National Uniform Crime Reporting System

ORI	ORI Number	Agency	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Total

NIBRS main menu.

Data Entry...

- Quick and Orderly Data Entry Process - NIBRS walks the user through each screen required for the circumstances of the incident.
- Familiar Windows based features - These include flexible search, sort and filter capabilities, selections using drop down (combo) boxes, and flexible report generation.
- One-time data entry - No more duplication of effort. Data entered in the system is available to all users immediately.
- Error Checking at the field, form and incident levels - Numerous edits contained in the forms add to the integrity and accuracy of data entered.
- Convenient Error Correcting Process - A simple mouse click takes the user to the incident and the exact field which is in error.
- Locate Incidents and Names based on Criteria Entered. Reports can be generated based on the Criteria entered or an incident can be selected for editing.

Transfer of Data...

- Incidents are easily transferred each month via diskette or e-mail from the local NIBRS to the State's NIBRS and then on to the FBI NIBRS database.
- Edited/Corrected Reports can be imported back from the State database.
- Local agencies are allowed to use software other than NIBRS to process incidents. NIBRS imports incidents written to a fixed length format and processes them in the same way as incidents entered directly into NIBRS.

NIBRS has Built in Mapping!

NIBRS mapping capability.

Mapping Functions...

- Address Standardization: conversion of entered addresses into a standardized format
- Dot Density crime maps that include crime "hot spots"
- Locations of crime by time, age, race, sex, etc. as well as crimes near landmarks such as schools
- Patterns and trends of crime with addresses of known offenders such as increases or decreases of drug arrests over time
- Incident and crime reports within specified distances of landmarks (ex. schools)

NIBRS offense information can lead to Mapping Hot Zones to Patrol.
